

Rutland

Unitary authority

This profile was published on 4th July 2017

Health Profile 2017

Health in summary

The health of people in Rutland is generally better than the England average. Rutland is one of the 20% least deprived districts/unitary authorities in England, however about 9% (500) of children live in low income families. Life expectancy for both men and women is higher than the England average.

Child health

In Year 6, 15.7% (53) of children are classified as obese. Levels of teenage pregnancy, GCSE attainment and breastfeeding initiation are better than the England average.

Adult health

The rate of alcohol-related harm hospital stays is 566*, better than the average for England. This represents 224 stays per year. The rate of self-harm hospital stays is 127*, better than the average for England. This represents 47 stays per year. The rate of smoking related deaths is 192*, better than the average for England. This represents 51 deaths per year. Estimated levels of adult excess weight are worse than the England average. Estimated levels of adult physical activity are better than the England average. The rate of people killed and seriously injured on roads is worse than average. Rates of sexually transmitted infections and TB are better than average. Rates of violent crime, long term unemployment, early deaths from cardiovascular diseases and early deaths from cancer are better than average.

Local priorities

Priorities in Rutland include giving children the best start in life, enabling people to take responsibility for their health, helping people to live longer and healthier lives, and making services more accessible. For more information see www.rutland.gov.uk

Population: summary characteristics

	Males	Females	Persons
Rutland (population in thousands)			
Population (2015):	19	19	38
Projected population (2020):	20	19	38
% people from an ethnic minority group:	*	*	*
Dependency ratio (dependants / working population) x 100			73.4%

England (population in thousands)			
Population (2015):	27,029	27,757	54,786
Projected population (2020):	28,157	28,706	56,862
% people from an ethnic minority group:	13.1%	13.4%	13.2%
Dependency ratio (dependants / working population) x 100			60.7%

* - value suppressed due to small numbers

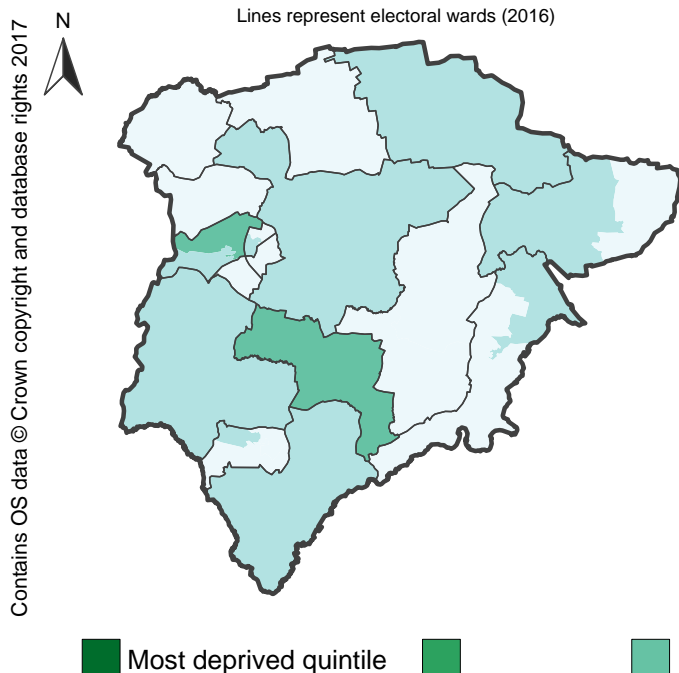

The age profile and table present demographic information for the residents of the area and England. They include a 2014-based population projection (to 2020), the percentage of people from an ethnic minority group (Annual Population Survey, October 2014 to September 2015) and the dependency ratio.

The dependency ratio estimates the number of dependants in an area by comparing the number of people considered less likely to be working (children aged under 16 and those of state pension age or above) with the working age population. A high ratio suggests the area might want to commission a greater level of services for older or younger people than those areas with a low ratio.

- Rutland 2015 (Female)
- England 2015
- Rutland 2020 estimate

Deprivation: a national view

The map shows differences in deprivation in this area based on national comparisons, using national quintiles (fifths) of the Index of Multiple Deprivation 2015 (IMD 2015), shown by lower super output area. The darkest coloured areas are some of the most deprived neighbourhoods in England.

This chart shows the percentage of the population who live in areas at each level of deprivation.

Life expectancy: inequalities in this local authority

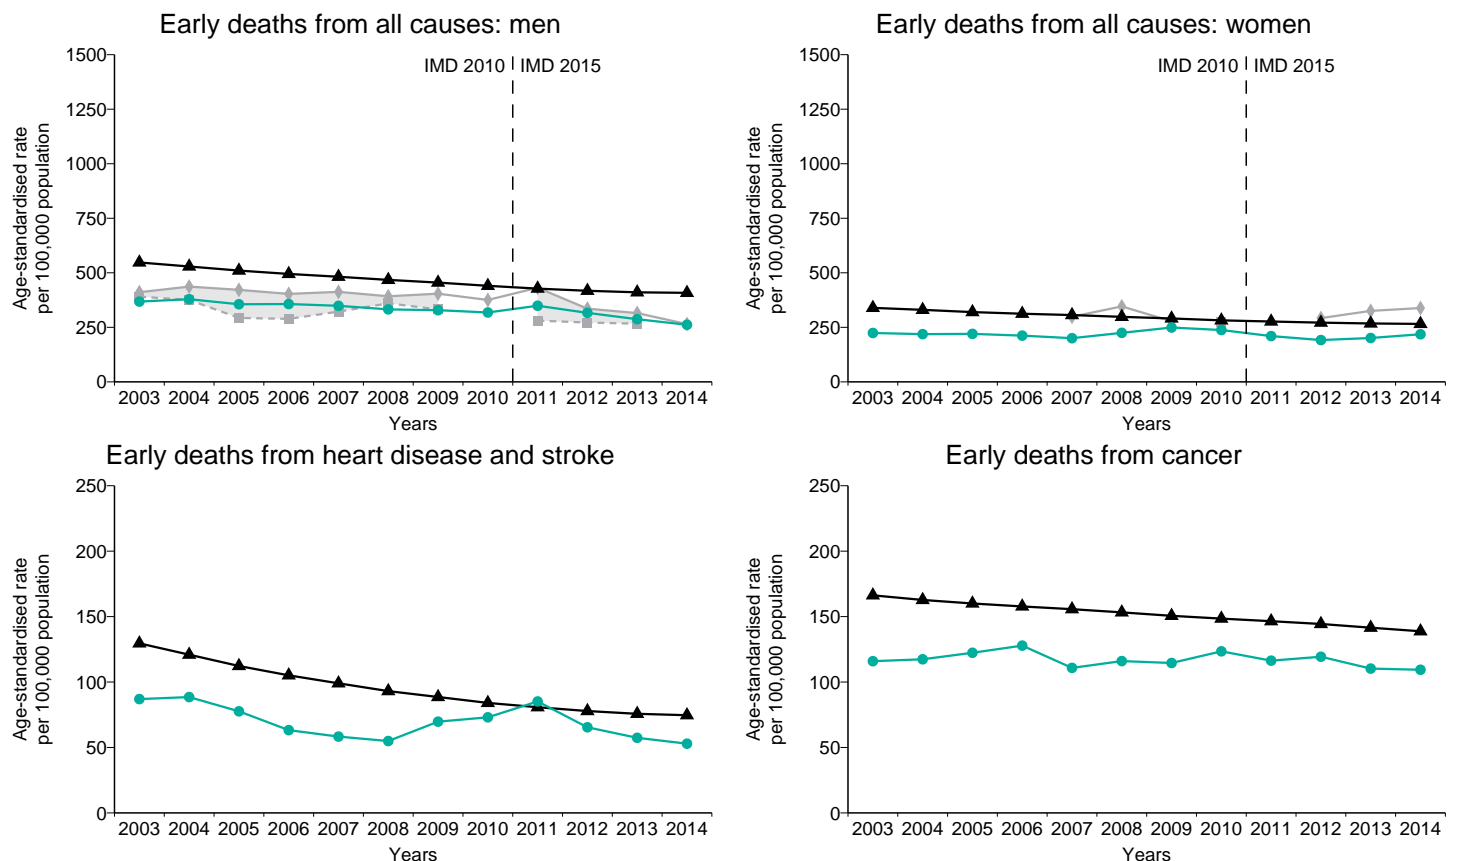

The charts show life expectancy for men and women in this local authority for 2013-15. The local authority is divided into local deciles (tenths) by deprivation (IMD 2015), from the most deprived decile on the left of the chart to the least deprived decile on the right. The steepness of the slope represents the inequality in life expectancy that is related to deprivation in this local area. If there was no inequality in life expectancy the line would be horizontal.

The slope index of inequality for men in Rutland cannot be calculated, due to the unreliability of the life expectancy value for one or more deprivation decile in this area

The slope index of inequality for women in Rutland cannot be calculated, due to the unreliability of the life expectancy value for one or more deprivation decile in this area

Health inequalities: changes over time

These charts provide a comparison of the changes in death rates in people under 75 (early deaths) between this area and England. Early deaths from all causes also show the differences between the most and least deprived local quintile in this area. Data from 2010-12 onwards have been revised to use IMD 2015 to define local deprivation quintiles (fifths), all prior time points use IMD 2010. In doing this, areas are grouped into deprivation quintiles using the Index of Multiple Deprivation which most closely aligns with time period of the data. This provides a more accurate way of discriminating changes between similarly deprived areas over time.

Data points are the midpoints of three year averages of annual rates, for example 2005 represents the period 2004 to 2006. Where data are missing for local least or most deprived, the value could not be calculated as the number of cases is too small.

▲ England average ● Local average ■ Local least deprived ◆ Local most deprived ■ Local inequality

Health summary for Rutland

The chart below shows how the health of people in this area compares with the rest of England. This area's result for each indicator is shown as a circle. The average rate for England is shown by the black line, which is always at the centre of the chart. The range of results for all local areas in England is shown as a grey bar. A red circle means that this area is significantly worse than England for that indicator; however, a green circle may still indicate an important public health problem.

- Significantly worse than England average
- Not significantly different from England average
- Significantly better than England average
- Not compared
