

Superfast Broadband is Here

- Do you get frustrated when you're streaming videos and they keep buffering?
- Do you struggle to Skype and FaceTime with friends and family due to poor Wifi?
- Does homework take ages because the internet is too slow?
- Are you trying to run a business and losing money due to poor internet speeds?

**It's easy to
connect and
makes everything
faster online**

**Turn over to find out how
to get faster broadband**

How to get faster broadband and find the best deal in three easy steps

Step 1: Contact your chosen Internet Service provider

to see if superfast broadband is available at your address or visit gosuperfastchecker.culture.gov.uk

Step 2: Find out if you can upgrade or switch

Ask your current provider if you can upgrade to a superfast (or faster) broadband package within your existing contract, or shop around using broadband comparison sites to find the best deal.

Ofcom's independent website www.boostyourbroadband.com has lots of practical tips and advice to help you get started or to find the best deal.

Step 3: Place your order and get connected

With Fibre to the Cabinet (FTTC) once you have ordered, your Internet Service Provider will arrange the connection, send you a router, and inform you when it is live. With Fibre to the Premises (FTTP) an engineer visit will normally be required.

What speed do you need?

STANDARD

10mbps

Broadband basics: news, keeping in touch with family and friends, some online shopping.

SUPERFAST

from 24mbps

Broadband basics+ watching TV and films, and listening to music

ULTRAFAST

from 300mbps

Multiple devices at the same time - working, streaming, gaming, video-calling or uploading
